REVEE®

TO TREAT AND PREVENT
HYPERTROPHIC SCARS AND KELOIDS

TOPICAL GEL FOR SCARS

**SILICONE GEL FOR TOPICAL USE
INDICATED TO TREAT AND PREVENT
HYPERTROPHIC SCARS AND KELOIDS**

DESIGNED TO:

- Relieve pain
- Reduce itching
- Flatten and soften scars

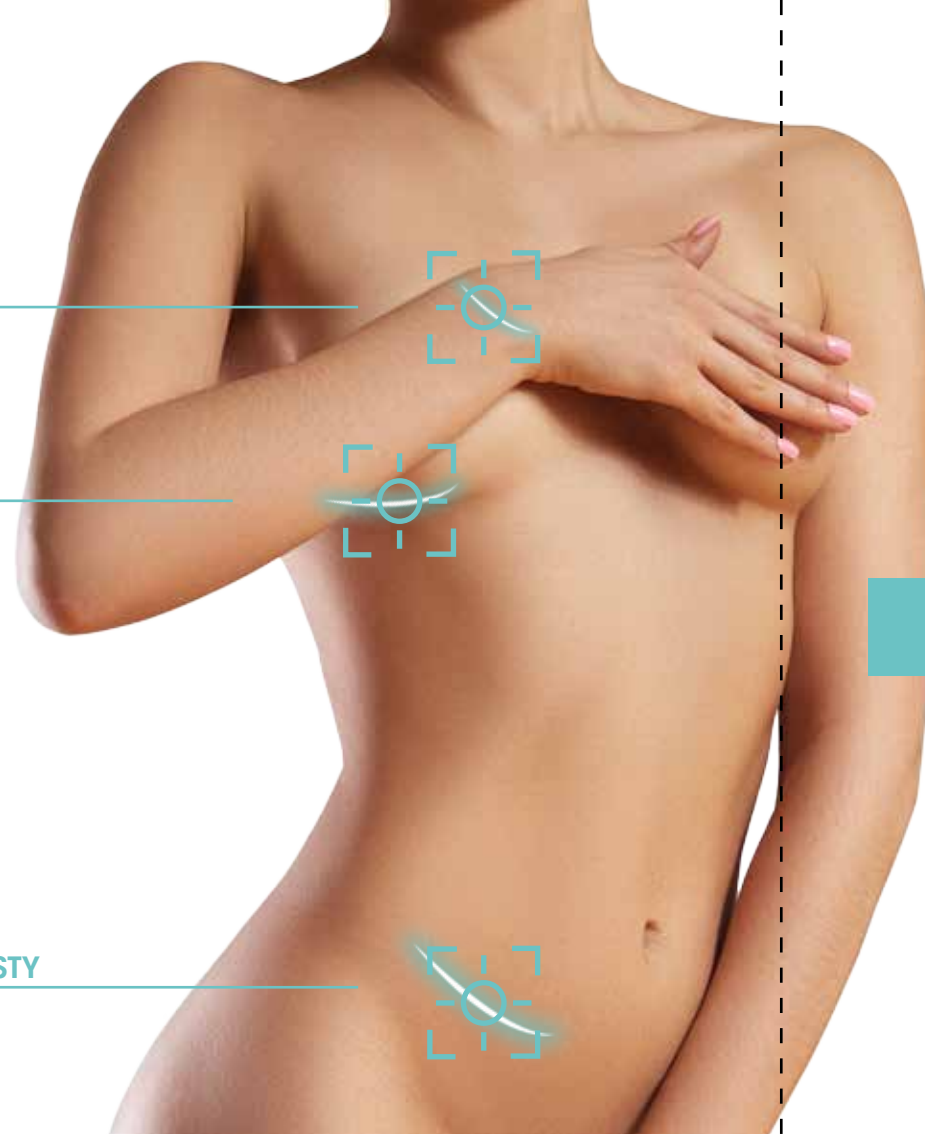

FOR WHAT IS REVÉE® SCAR GEL INDICATED?

It is indicated to treat and prevent hypertrophic scars and keloids caused by burns, surgeries or traumas after the wound has fully healed and in presence of an unaffected or closed skin surface. It is also used for reddish and raised immature scars during the active healing process.

WHAT IS REVÉE® SCAR GEL?

It is a transparent and 100%-medical-grade silicone gel. It is recommended to treat scars due to surgeries, burns and other injuries, because it dries quickly and helps maintain proper skin hydration. It has been shown that the use of medical silicone flattens, softens and smooths scars, relieves the pain, itching and discomfort associated with them, as well as making the redness of the scar tissue less pronounced. Revée® Scar Gel is easily applicable on all skin surfaces, including face, breast, joints, and body parts stressed by movement. It dries quickly, creating a transparent film, on top of which it is then possible to apply sun cream without compromising its effectiveness.

**REVÉE® SCAR GEL
TESTED ALSO TO BE USED ON CHILDREN.**
